

Further Information

- The 2015 Supreme Court 'Montgomery Ruling' established a **legal obligation** on health workers to facilitate the **informed consent** of patients, including the **material risks** of proposed treatment.
- Excellent documentaries: 'Vaxxed', 'Vaccines Revealed', 'The Truth About Vaccines', 'Vaccine Syndrome', 'Trace Amounts', 'Bought'.

What Can We Do?

- **Educate yourself** in order to make **genuinely informed choices** about whether to risk vaccinating yourself or your children.
- **Complain** to Public Health England (PHE) / Medicines and Healthcare products Regulatory Agency (MHRA) / (European Medicines Agency (EMA)
- **Make** a Freedom of Information (FoI) request
- **Write** to / e-mail your local councillors / MP / MEPs
- **Phone** into local or national radio programmes
- **Write** to newspapers
- **Post** about it in your social media networks
- **Tell** your friends, relatives, neighbours & work colleagues
- **Print** more of these leaflets and distribute them locally

Vaccines—Safe & Effective? **NOT!**

We're *told* that to protect public health, widespread vaccination with an ever-increasing schedule of vaccines is essential. We're *told* that vaccines are safe and effective... **but thousands of bona fide peer-reviewed scientific research papers suggest otherwise.** It turns out that vaccines are **unavoidably unsafe** and carry a significant risk of **serious side effects** and that they are **nowhere near as effective** as we are led to believe.

The problems:

- Significant risk of **serious harm** from vaccines.
- Some efficacy studies show such **low levels** of **protection** and **immunological persistence** as to render the vaccines **worthless** on a cost-risk-benefit basis.
- Most GPs are unqualified in medical research, don't read scientific papers but **simply regurgitate** safety info from **vaccine manufacturers** and **government agencies**.
- Vaccine studies are frequently funded by the **manufacturers**, who have **major influence** over study design.
- 'Revolving doors' between Big Pharma and regulatory bodies **undermine the impartiality and credibility of studies**.
- Governments & manufacturers have vested interests in protecting vaccination programs, and **mask or bury negative results**.
- Lack of **proper safety studies** especially on long term effects; many studies turn out to be **fundamentally flawed** to the extent that they constitute **outright scientific fraud and deception**.
- Massive bias in the **pro-vaccine propaganda machine**.
- **Unvaccinated** children tend to have better health outcomes.

The Adverse Effects of Vaccines

- **Hepatitis B vaccine:** autoimmune diseases, CNS inflammatory demyelination, multiple sclerosis, acute posterior multifocal placoid pigment epitheliopathy, anaphalaxis, Guillain-Barré syndrome, liver problems, lupus erythematosus, myelitis, sudden infant death syndrome (SIDS), uveitis, arthritis, autism spectrum disorders, autoimmune inflammatory polyneuropathy, Bell's palsy, central vein occlusion, chronic fatigue syndrome (CFS), dermatomyositis, erythema multiforme, fibromyalgia, gastrointestinal diseases, hepatitis, inflammatory polyradiculoneuropathy, lichen planus, low efficacy, death, neuropathy, optic neuritis, papillary oedema, transverse myelitis, vasculitis.
- **Influenza vaccine:** low efficacy, Guillain-Barré syndrome, increased vulnerability to future 'flu strains and other respiratory infections, acute renal failure, allergies, arthritis, autism spectrum disorders, autoimmune diseases, cardiovascular problems, CNS inflammatory demyelination, multiple sclerosis, erythema multiforme, giant cell arteritis, immune haemolytic anaemia, miller-fisher syndrome, narcolepsy, preeclampsia, preterm birth, thrombocytopaenia, transverse myelitis, type 1 diabetes, vasculitis.
- **Measles, Mumps & Rubella (German measles) (MMR) vaccine:** autism spectrum disorders, low efficacy, idiopathic thrombocytopaenic purpura, unilateral optic neuritis, anaphalaxis, CNS inflammatory demyelination, multiple sclerosis, optic neuritis, thrombocytopaenia, transverse myelitis, type 1 diabetes, ulcerative colitis.
- **Pertussis (whooping cough) vaccine:** low efficacy, encephalopathy, hypotonic-hyporesponsive episodes, asthma, CNS inflammatory demyelination & other complications, multiple sclerosis, neurological disorders, seizure, sudden infant death syndrome (SIDS), type 1 diabetes.
- **Human Papilloma Virus (HPV) vaccine:** autoimmune diseases, lupus erythematosus, abortion / miscarriage, arthritis, CNS inflammatory demyelination, multiple sclerosis, erythema multiforme, Guillain-Barré syndrome, idiopathic thrombocytopaenic purpura, infertility, low efficacy, pancreatitis, postural tachycardia syndrome (POTS), syncope, venous thromboembolism. Cervical cancer incidence has **increased** since HPV vaccination began in 2008; girls already HPV infected are **44% more likely** to get cancer if vaccinated. 1 in 40 recipients experience a severe adverse reaction and 1 in 33 autoimmunity problems.
- **Diphtheria-Tetanus-Pertussis (DTP/DTaP/DTwP) vaccines:** sudden infant death syndrome (SIDS), infant mortality, low efficacy, allergies, asthma, brachial neuritis, CNS inflammatory demyelination, multiple sclerosis, erythema multiforme, Guillain-Barré syndrome, death, transverse myelitis, urinary tract diseases.
- **Poliovirus vaccine:** paralytic poliomyelitis, acute flaccid paralysis, sudden infant death syndrome (SIDS), idiopathic thrombocytopaenic purpura, low efficacy, shedding. Many vaccination programmes have been terminated because they were actually causing polio epidemics.
- **Measles vaccine:** low efficacy, autism spectrum disorders, infant mortality, CNS inflammatory demyelination, multiple sclerosis, immunodeficiency, measles, death, neurological disorders, parkinsonism, shedding.

- **Varicella (chicken pox) vaccine:** herpes zoster (shingles), varicella breakthrough, vaccine shedding, aplastic anaemia, low efficacy, meningitis, neuropathy.
- **H1N1 (bird flu)/Pandemrix vaccine:** Guillain-Barré syndrome, narcolepsy, sleep disturbances.
- **Other vaccines:** these and other adverse effects.

Vaccine Ingredients, Adjuvants & Contaminants

Many vaccines contain the neurotoxins aluminium and/or mercury; mercury is used in some multi-dose vaccines as a preservative and aluminium as an 'adjuvant' to provoke a generalised immune system reaction. Neither has **ever** been properly tested for safety but studies show clear associations with autism, chronic fatigue syndrome, macrophagic myofasciitis, neurodevelopmental & neurological disorders & deficits, allergies, autoimmune disorders, gut dysbiosis, Crohn's disease and a host of other adverse effects. Vaccines also contain surfactants such as Polysorbate 80, stabilisers such as monosodium glutamate, antibiotics, carcinogens such as formaldehyde and toxins such as phenol. Some vaccines contain human and animal cell lines, GM yeast and some have been found to contain adventitious contaminants such as bacterial and viral DNA. For a full analysis of the ingredients of the vaccines in the UK vaccine schedule, see this spreadsheet: <http://campaign-resources.org/resources/Vaccine%20Schedule%20UK%202017.xlsx> (also in PDF).

The Scientific Evidence

Every adverse effect described above is documented in at least one (and in some cases many) **peer reviewed paper** in reputable medical research journals. To see the research backing the medical claims in this leaflet, download this **Vaccine Research spreadsheet**: <http://campaign-resources.org/resources/Vaccine%20Research.xlsx> (also in PDF). Reported adverse effects range from mild and temporary to serious / life threatening and permanent (incl. death), and confidence levels in the conclusions range from possible to highly probable.

The Pharmaceutical Industry

Big Pharma's unethical business model is to seek profit and revenue growth above all other considerations, lobbying governments to add ever more vaccines to the schedules and to enforce mandatory vaccination. Unsatisfactory studies revealing safety issues or low efficacy are rigged or buried. Widespread health problems caused by vaccines simply guarantee future drug sales. The industry treats multi-million dollar fines as just the cost of doing business.
